

Preethi Agnes Thomas

+971 50 589 6225 | Dubai, UAE | preethiagnest@gmail.com | linkedin.com/in/preethi-agnes-thomas | github.com/preethiagnes

Senior DevOps & Platform Engineer

DevSecOps | Cloud Security Engineering | Site Reliability Engineering (SRE)

AWS & Cloud Infrastructure | CI/CD & Pipeline Automation | DevSecOps & Security Integration | Site Reliability Engineering (SRE) | Containerization & Orchestration | Workload Identity (IRSA, OIDC) | Secrets Management | Kubernetes Security (RBAC, Policy Controls) | IAM Governance | Secure Software Supply Chain | Terraform | HashiCorp Vault | Agentic AI Engineering

Senior DevOps Engineer with 9+ years of experience in Cloud, DevOps, DevSecOps, and Platform Engineering, with extensive hands-on expertise in AWS, Kubernetes, Infrastructure as Code, CI/CD automation, and cloud-native technologies. Experienced in supporting large-scale enterprise applications in the aviation domain for United Airlines, with a strong focus on high availability, scalability, disaster recovery, security, observability, and production reliability. Proven experience in automating infrastructure and deployment processes, managing containerized workloads, implementing DevSecOps practices, adopting agentic AI tools to accelerate engineering workflows, and troubleshooting complex production environments. Strong collaborator with development, security, and operations teams, with experience driving infrastructure improvements and reliable software delivery across enterprise environments.

NOTABLE ACHIEVEMENT HIGHLIGHTS (LAST 5 YEARS)

- Implemented secure workload identity using IAM roles (IRSA) for Kubernetes workloads, eliminating static credentials and enforcing least-privilege access across services (2024–2026)
- Strengthened secrets management practices using AWS-native solutions, ensuring secure handling of sensitive data across CI/CD pipelines and application environments (2023–2026)
- Conducted AWS cloud security assessments using Prowler against CIS AWS Foundations Benchmark and AWS Security Best Practices, evaluating IAM, EC2, S3, VPC, CloudTrail, AWS Config, KMS, Security Groups, and encryption controls to identify misconfigurations and drive remediation (2024–2026)
- Adopted agentic AI tools — Claude Code for AI-assisted infrastructure and pipeline development, and Dynatrace Davis AI for intelligent observability — including automated monitoring job creation synced with Disaster Recovery (DR) exercises to strengthen resilience validation (2025–2026)
- Reduced AWS cloud spend by ~20% through rightsizing, auto-scaling optimization, and resource cleanup across 6+ production applications (2023–2025)
- Prevented a high-risk production release through risk assessment and early rollback execution, protecting platform stability for US and India user bases (2024)
- Enforced zero-gap security coverage by integrating Veracode, Wiz, and SonarCloud into CI/CD pipelines, blocking vulnerable code from reaching production (2023–2025)
- Applied cloud security best practices including IAM hardening, least privilege, encryption, logging, vulnerability remediation, and continuous compliance validation across AWS environments

WORK EXPERIENCE

Tescra Software Pvt Ltd — United Airlines – India & Dubai, UAE

09/2024 – 07/2026

Senior DevOps Engineer

Sole platform owner accountable for cloud infrastructure, security posture, and release reliability across 6 production applications serving US and India markets, operating in a cross-regional India-US model with direct reporting to Senior Leadership.

- Integrated Veracode, Wiz, and SonarCloud into CI/CD pipelines, enforcing SAST, SCA, IaC, and container image scanning gates with policy-as-code validation — blocking 100% of non-compliant builds from reaching production.
- Led the migration from AWS AppSync to Kong API Gateway, designing and configuring Kong routes and services to centralize API traffic and improve routing, security, and operational control.
- Integrated Microsoft Entra ID (Azure AD) with Kong Gateway via OAuth 2.0/OpenID Connect, configuring Kong to validate Entra ID-issued JWT tokens and enforcing RBAC-based authorization through Entra ID groups/claims to enable secure SSO for enterprise APIs.
- Managed AWS EKS/Kubernetes clusters supporting Kong Gateway workloads, ensuring high availability and zero-downtime deployments alongside AWS networking, IAM, and Route 53.
- Automated supporting AWS infrastructure using Terraform / Infrastructure as Code, integrating gateway-related changes into CI/CD deployment workflows.
- Conducted AWS cloud security assessments using Prowler to evaluate IAM, S3, EC2, VPC, CloudTrail, Config, KMS, Security Groups, and encryption settings for licensing and compliance initiatives; collaborated with development and platform teams to remediate findings and harden configurations.
- Containerized a high-traffic production service onto ECS Fargate with ALB integration, auto-scaling task definitions, and health check configurations, cutting infrastructure costs while improving service resilience.
- Architected secure, highly available AWS infrastructure (EC2, ECS, Lambda, VPC, IAM, S3, RDS, KMS, CloudTrail) following AWS Security Best Practices and least-privilege access principles.
- Engineered CI/CD pipelines using Harness, GitHub Actions, and AWS CodePipeline, increasing deployment frequency by 3x.
- Applied secure architecture principles aligned with IAM hardening, API security, and secure configuration management.

- Leveraged Claude Code as an agentic AI coding assistant to accelerate infrastructure automation, troubleshooting, and CI/CD workflow development, improving engineering velocity.
- Integrated Dynatrace Davis AI for AI-driven anomaly detection and observability, configuring automated monitoring jobs synced with Disaster Recovery (DR) exercises to validate failover readiness and reduce manual monitoring effort.

Expleo Software Private Limited – India

09/2023 – 09/2024

Lead Software Engineer (DevOps)

Led a 3-engineer DevOps team with full ownership of cloud infrastructure design, release pipeline delivery, and platform automation across multiple client programmes — including a UAE-based banking client — reporting to Senior Manager.

- Designed multi-environment AWS infrastructure using CloudFormation, establishing repeatable provisioning standards across 4+ client projects and eliminating configuration drift between environments.
- Built and governed CI/CD pipelines using Azure DevOps and GitHub Actions, improving release velocity by standardising deployment workflows across cross-functional teams.
- Designed and enforced secure CI/CD pipelines with integrated vulnerability scanning (Veracode, Snyk), ensuring security validation at every stage of the delivery lifecycle.
- Introduced secure containerization practices, including image versioning, vulnerability-aware deployments, and environment parity across the delivery pipeline.
- Strengthened IAM governance and access control, ensuring least-privilege access across cloud environments.
- Instrumented CloudWatch, New Relic, and ELK Stack across client environments, improving log correlation and reducing mean-time-to-resolution by 35%.

PayPerform India Private Limited – India

06/2021 – 08/2023

Senior DevOps Engineer

Held full accountability for SaaS platform infrastructure stability, release pipeline performance, and engineering quality standards, mentoring 3 junior engineers and reporting to Solution Architect.

- Scaled AWS services (EC2, S3, RDS, VPC, IAM) across high-availability SaaS architectures, sustaining ~99.9% uptime through structured monitoring and root cause analysis workflows.
- Engineered AWS CodePipeline release workflows integrated with Git version control, reducing release cycle time by ~30% and manual intervention by ~40%.
- Implemented secure CI/CD practices by integrating vulnerability scanning (Veracode, Snyk), enforcing security validation and compliance across all release environments.
- Standardised Docker-based microservices infrastructure across environments, enabling consistent and reliable deployments throughout the delivery lifecycle.
- Instrumented production systems with CloudWatch, New Relic, and ELK Stack, improving monitoring visibility and enabling ~10–15% cloud cost optimization through usage analysis.

EARLY CAREER

- Maxpi Technologies, Bangalore | DevOps Engineer | 05/2019 – 06/2021 — Administered AWS cloud infrastructure and release pipelines across production environments, implementing Docker containerization and configuring Auto Scaling Groups and Application Load Balancers to sustain high availability.
- Tata Consultancy Services, Chennai | System Engineer | 03/2017 – 05/2019 — Supported enterprise application release operations across Linux environments, developing shell scripts and applying monitoring tools to maintain deployment consistency and environment stability at scale.

EDUCATION

Bachelor of Technology— Rajalakshmi Engineering College, Chennai, India

SKILLS

Cloud Security: AWS Security, Cloud Security Assessments, Security Architecture, Risk Assessment, CIS AWS Foundations Benchmark, AWS Security Best Practices

Security Tools: Prowler, Veracode, Wiz, SonarCloud, Snyk

Application Security: SAST, DAST, SCA, IaC Security, Container Security, Vulnerability Management

Identity & Access: IAM, RBAC, IRSA, OIDC, AWS KMS, AWS Secrets Manager

Cloud & DevOps: Terraform, CloudFormation, Docker, Kubernetes, ECS, Lambda, GitHub Actions, Azure DevOps, Harness, Jenkins

Agentic AI & AI-Assisted Engineering: Claude Code, Dynatrace Davis AI

Monitoring: Dynatrace, CloudWatch

CERTIFICATIONS

- AWS Certified Solutions Architect
